Section 1: Introduction

A: What is Women’s Microfinance Initiative?

The Women’s Microfinance Initiative (WMI) is a non-profit organization working to establish village-level loan hubs, administered by local women, to provide capital, training and support to women in Uganda. Based in the United States, WMI has been operating in Uganda since 2008. Today, there are seven loan hubs in Uganda, with over 11,000 borrowers to date.

Women who participate in WMI’s comprehensive two-year program receive a total of four loans on a bi-annual basis. The loan amount increases each six-month cycle, with the largest loan valued at $250 (UGX 500,000). Borrowers are issued loans individually and organized into groups of twenty. This methodology allows borrowers to become part of a supportive network of female entrepreneurs and work with one another to ensure loan repayment. This system of accountability has led to a 97% loan repayment rate. Borrowers are also enrolled in training courses in business management, record-keeping and savings. This model introduces women to traditional banking and the formal economy, ultimately setting them up for financial independence.

B: What does WMI aim to do?

WMI’s grass root operations aim for a triple bottom line impact. First of all, WMI supports rural women in starting profitable sustainable businesses. With these profits, the women improve their household living standards in terms of their quality and quantity of food, access to healthcare and access to education for their children. Secondly, WMI partners with woman-managed Community Based Organizations (CBOs) to administer the loans, building human capacity in the villages and empowering these CBOs to become a resource for the local community. The CBOs administer the loan program and serve as a distribution point for peer-to-peer knowledge transfer and organizing social services such as health checks, sanitation upgrades, and literacy training. Thirdly, WMI supports structural changes in interactions between rural women and the traditional financial sector. By offering loans without collateral and by training borrowers in effective business management, WMI’s clients become empowered advocates for themselves and their communities.

Quick Facts

- **Year began**: 2008
- **Number of hubs**: Seven hubs in Uganda (additional hubs in Kenya and Tanzania)
- **Number of women served**: 11,918 to date
- **Total loans issued**: $4,494,848 to date
Section 2: Methodology

A: How was the data in this fact book collected?

The data in this fact book was generated through data collected from borrowers, in a process supervised by the local CBOs. Borrowers fill out three surveys in their two years with the WMI loan program: one survey before they are issued their first loan, a follow-up survey after one year in the program, and an exit survey after they have completed the two-year program. The surveys are administered by local coordinators to the women in each loan group. The data in this survey was collected from July 2016 to April 2017.

B: Who was surveyed?

A number of groups from WMI’s Ugandan hubs were selected, with the survey data for those groups being collated for analysis purposes. The majority of the groups are from the Buyobo loan hub in Sironko District. Other loan hubs include groups in Bududa and Kabale Districts. The data presented in this fact book is based on a total of 1,320 surveys at different points in the loan program and represent a variety of the businesses that WMI supports through its loan program.

Figure 2: The Variety of Businesses Supported by the WMI Loan Program

Zita Wolayo has big dreams for her all-purpose shop in the upcoming year. By using her capital from her Jumbo loan, as well as her connections in town, she plans to “expand her business into town where [she] can increase [her] customer base and charge higher prices.” To do this, she hopes to employ her daughter to help her run the shops.

As a mother of nine, WMI’s adult literacy courses, as well as training in budgeting and record keeping have not only benefitted Irene Matto’s produce business, but her household as well. Since receiving her WMI loan in 2016 she has been “dressing, eating and feeling better,” and her children are now able to go to school.

Figure 12: Monthly Income Distribution Before Joining WMI Loan Program

Figure 13: Monthly Income Distribution After Two Years in WMI Loan Program

Before joining the loan program, 90% of borrowers make less than $46 (UGX 165,600) per month and the distribution suggests an average income of $32 (UGX 115,200) for women joining the program. After two years in the program, 86% of borrowers report a monthly income higher than $112 (UGX 403,200) and the average monthly income upon exiting the two-year loan program is $169 (UGX608,400). This represents a 428% increase in monthly income.

Figure 14: Total Savings Distribution Before Joining WMI Loan Program

Figure 15: Total Savings Distribution After Two Years in WMI Loan Program

Before joining the loan program, women have an average total savings of $18 (UGX 64,800) with 68% of borrowers having less than $14 (UGX 50,000) in total savings. After two years in the program, 94% of borrowers report saving regularly with an average monthly saving of $7 (UGX 25,000) and an average total savings of $43 (UGX 154,800). This represents a 139% increase in total savings.

4 Throughout this section, exchange rate used at June 2017 is $1 = UGX 3600
Section 4: Impacts of WMI Loan Program

III: Livestock Acquired
After two years in the program, borrowers report having bought the following livestock in the last six months of the two-year program.

![Figure 16: Distribution of Livestock Bought by the Women in Last Six Months of Two-Year Loan Program](image)

After one year in the program 60% of borrowers report buying livestock and 99% of borrowers report purchasing at least one form of livestock in the last six months of the WMI two-year loan program. 46% of borrowers purchased cows, which is the most valuable livestock and 61% of borrowers purchased goats, the second most valuable livestock.

IV: Difficulty of Loan Repayment
After two years in the loan program, 54% of borrowers find it “Easy” or “Very Easy” to repay their loans. 46% of borrowers find it “Average” to repay their loans. No woman finds it “Hard” or “Very Hard” to repay her loans.

![Figure 17: Ease of Loan Repayment After Two Years in the Loan Program](image)

V: Business Growth and Stability

After one year in program
99% of borrowers report a growth in their business.

After two years in program
99% of borrowers report greater business stability.

5 In Uganda, buying livestock is a common way to invest - through reproduction, livestock numbers multiply and thus generate additional value overtime – and 2. Save - livestock does not lose value due to inflation, which can secure savings against frequent currency fluctuations.
Section 4: Impacts of WMI Loan Program

B: Personal Impact and Growth

I: Skills

Business Skills:

After one year in the program, 98% of borrowers report an improvement in at least one of the following business skills:

![Bar chart showing improved business skills after one year in the program.]

Personal Skills:

After two years in the program, 100% of borrowers report an improvement in at least one of the following personal skills:

![Bar chart showing improved personal skills after two years in the program.]

II: Standards of Living

Across each stage of the loan program, the top three expenditures are medical payments (84%), school fees (80%) and food (68%). Therefore, to track the greatest impact on standard of living of women in the program, we analyse health, education and quality of food indicators to deduce the effect of increased profits on the borrowers and their families.
Section 4: Impacts of WMI Loan Program

Health

After one year in program

• **98% of borrowers** report an increase in ease of paying medical fees.

• **96% of borrowers** bought more mosquito nets since receiving their second loan in the cycle.

After two years in program

• **100% of borrowers** report an improvement in health in the last six months.

• **100% of borrowers** report an improvement in family’s health in the last six months.

Education

Surveyed at the end of the two-year program, of the **63% of borrowers** who pay secondary school fees, **93%** indicated they would not be able to pay the fees without their business income.

Surveyed at the end of the two-year program, of the **19% of borrowers** who pay university school fees, **91%** indicated they would not be able to pay the fees without their business income.
Section 4: Impacts of WMI Loan Program

Quality of Food

After one year in program

- **100% of borrowers** report an increase in at least one of the following in their meals:
  - Food: 100%
  - Meat: 39%
  - Vegetables: 46%
  - Eggs: 16%
  - Milk: 23%

After two years in program

- **78% of borrowers** report an improvement in meals in the home in the last six months of the two-year program.

Other Improvements to Standard of Living

<table>

<td>51% of borrowers</td>
<td>Data unavailable</td>
</tr>
</tbody>
</table>

*Improvements were made in the last six months before the end of the loan program.

For Joyce Gizamba, WMI’s impact hasn’t just meant increased income. It’s meant positive changes in her community. She says, “women are no longer idle, they are now busy running their businesses and are more independent.” This has also meant “domestic violence has declined, as there is less fighting about money and women have more power in households.”

Table 1: Other Improvements to Standard of Living
Section 4: Impacts of WMI Loan Program

C: Community Engagement

I: Community-wide Impacts of Loan Program

Widespread Changes in the Community

When asked about the impact of the loan program, 100% of borrowers reported positive changes in their community as a result of the program. A third of borrowers reported that the loan program has improved standards of living throughout the community, specifically citing increased access to food and education, happier families and increased access to services and medical treatment. Respondents also reported that women in the greater community are more independent and self-reliant, that they are financially empowered, and that there is more cooperation between husbands and wives.

Ripple Effects of Women in Business

Over 98% of WMI’s borrowers report that their business allowed them to help other people. Of these, 70% use the funds from their business to support orphans, the elderly and widows in the community. The ripple effect of the loan program is significant: loans are directly benefitting not only WMI’s borrowers and their immediate families but also their extended families and other vulnerable members of the community. Further, borrowers report being business advisors to provide ideas to their peers, bringing services closer to the people who need them, and serving as community leaders as a result of the loan program.
Section 4: Impacts of WMI Loan Program

Changing Relationships between Men and Women

For 85% of borrowers, financial empowerment related to their participation in the loan program has also led to improved gender dynamics within their homes and communities. Of this 85% of women, 95% reported that they noticed more cooperation between men and women as a result of women’s increased incomes. Women also cited reduced domestic violence and fewer cases of divorce as impacts of increased women’s economic participation.

II: Community Project Highlights

Our local partners use the proceeds from loan interest payments to cover their operating expenses and to implement community projects. Projects are initiated in a variety of sectors and are managed exclusively by community members, maximizing impact and ensuring sustainability of programs.

In 2017, the Buyobo Women’s Association (BWA)\(^6\), the women’s group managing the Buyobo loan hub, will facilitate 11 community programs and 5 local infrastructure projects which will serve a total of over 15,000 people in the surrounding area. The focus of these projects is on further enhancing day-to-day life for everyone living in Sironko District. These projects include health outreach programs, girl empowerment programs and nutrition programs as well as significant infrastructure development such as building construction and water source renovations. WMI invests in community projects to support our entrepreneurs because we know that healthy and empowered communities thrive economically.

---

\(^6\) BWA is the CBO that oversees the Buyobo loan hub, one of WMI’s seven loan hubs in Uganda.
Section 4: Impacts of WMI Loan Program

**Girls’ Group and Boys’ Group**

**Funds invested in 2016:** $780  
**Estimated Beneficiaries:** 180 boys and girls

BWA supports early financial literacy through its Girls’ and Boys’ Groups. Girls and boys in grades 5, 6 and 7 learn budgeting and marketing skills to become tomorrow’s entrepreneurs. The Girls and Boys’ Groups also engage in their own income-generating activities. Both groups have invested in livestock and work collaboratively to care for their animals.

The 10-week courses also focus on prevention activities, teaching HIV and sexual education. BWA is lucky to have excellent facilitators for both groups, relying on teachers at local schools who know their pupils well and have a vested interest in their future success.

**Water Source Renovation**

**Funds invested in 2016:** $30,000  
**Estimated Beneficiaries:** 1,000+ individuals

Starting in 2016, WMI’s Buyobo loan hub in Uganda, in partnership with local government, renovated the Gibugomu water source, a natural spring that had been tapped to provide piped water to taps throughout the region. The piping and taps had fallen into disrepair and local government was unable to shoulder the full cost of the repairs, leaving much of the local population without access to clean drinking water.

The source renovation, which cost over $30,000, was completed in 2016. The renovation has dramatically improved quality of life for the Buyobo-area population by providing water that is safe to drink directly from the tap. Plus, the renovation added ten more community taps serving over 1500 people. The availability of water close to home has decreased the workload on women and girls who are traditionally responsible for fetching water. The investment will support improved quality-of-life and reduced disease burden in the communities for years to come.

---

Section 4: Impacts of WMI Loan Program

Volunteer Health Team

Funds invested in 2016: $500
Estimated Beneficiaries: 1,000+ community members

WMI’s Buyobo loan hub supports the outreach activities of the local Volunteer Health Team (VHT), an active group of community members providing preventive care services. They make home visits in their neighborhoods to teach proper home hygiene and to serve as a primary resource on health-related matters.

The Buyobo VHT has over eighty active members and meets frequently to plan and implement community health initiatives. It is also an important resource to facilitate new health-related activities funded by BWA; for example, when BWA instituted a motorcycle ambulance service, the VHT stood up to manage the project and maintain the ambulance.

Student Lunch Program

Funds invested in 2016: $1,500
Estimated Beneficiaries: 600 children

Primary school students at public schools in Uganda are not provided a lunch during school days. For many students, this means they spend their full school day hungry, adversely impacting their academic performance. The most heavily affected group of these students are those in grades 6 and 7 who must take critical exams which determine whether they are eligible to attend secondary school.

WMI’s Buyobo hub funds a student lunch program for grade 6 and 7 students to ensure that they have proper nutrition in-between classes during the school day. The program drastically increased the number of children who passed their exams and opened doors to secondary school and beyond. The program also provides testing resources, covering the cost of paper booklets and other supplies for test-takers.

Figure 29: Pictured above is a section of the Buyobo VHT. Pictured below is the motorcycle ambulance featuring the WMI logo

Figure 30: Some grade 6 and grade 7 girls having lunch sponsored by the WMI Student Lunch Program
Section 5: Conclusion

To date, WMI has served a total of over 11,000 women in Uganda. Its loan program continues to have positive economic and social impacts on its borrowers. Beyond this, the presence of the loan program has provided infrastructural development and positive interventions for the communities in which its hubs are situated.
